| About | /about/   | page   |

## Installation

Just fork this repository and adjust the `_config.yml` to use with [Github Pages](#) and your page is done.

## Features

- supports dark mode on macOS Mojave
- optional sidebar
- MathJax support
- no external resources
- included archive page
- supports pagination
- feed generation
- responsive
- syntax highlighting
- supports comments via [disqus](#) or [isso](#)

## Based on

- [Hyde](#)
- [Minima](#)
- [Lagrange](#)
- [Font Awesome](#)
- [KaTeX](#)
- [Pygments](#)

## Installation (jekyll-remote-theme method)

You can use this theme with the `jekyll-remote-theme` plugin. Just create an empty repo, copy over the `index.html` file and add this to your `_config.yml`:

```
remote_theme: niklasbuschmann/contrast@v2.11

plugins:
  - jekyll-remote-theme
```

Note: to enable icons you also need to copy over the `_data` folder.

## Config

Your `_config.yml` could for example look like this:

```
title: "Blog Title"
author: "Blog Author"
description: "My personal blog about ... something"
permalink: /:title/
lang: "en"
excerpt_separator: "\n\n\n"
date_format: "%B %d, %Y"

# Layout

show_excerpts: true # show article excerpts on the home page
show_frame: true # adds a gray frame to the site
show_sidebar: false # show a sidebar instead of the usual header

# Menu

navigation: # accepts {file, title, url, icon, sidebaricon}
  - {file: "index.html"}
  - {file: "README.md"}

external: # shows a footer with social links - for available icons see fontawesome.com/icons
```

```
plugins:
- jekyll-feed
```

## MathJax

Contrast comes preinstalled with a leightweight alternative to MathJax called [KaTeX](#). To display equations in a post simply set `mathjax: true` in the article's front matter.
